

Whenever and Wherever Our Forces Need it:

AMC
PROVIDES

U.S. ARMY
MATERIEL
COMMAND

The Army's Premier Provider of Materiel Readiness

U.S. ARMY
MATERIEL
COMMAND

Army Materiel Command (AMC)

was established in 1962, combining the Army's technical services and industrial capabilities with a single focus — to support America's Armed Forces. We serve as the exclusive point of integration between an organic industrial base and tactical operations.

From assembly lines to front lines, AMC provides full spectrum capabilities for full spectrum operations. Integrated and globally networked logistics is a massive orchestration of equipment production and distribution that ensures the United States continues to be the most powerful nation on earth.

AMC PROVIDES

AMC Provides Power

AMC pledges **materiel readiness** and dominance for America's Joint Services and our allies around the world.

As the Army's **Lead Materiel Integrator (LMI)**, AMC manages and distributes the right equipment in the right quantity – when and where our Soldiers need it.

Army Field Support Brigades (AFSBs) are embedded worldwide on the field – integrating acquisitions, logistics and technology to equip and sustain joint and coalition forces.

AMC Provides Production

Since our inception, AMC's mission has embraced the integrated **“Concept to Combat”** end-to-end **life cycle management** of materiel – from research and development, procurement and production, distribution and maintenance, and finally, disposal.

Using our **leading-edge technologies**, AMC designs and develops sophisticated innovations for combat weapons systems to improve survivability and lethality.

In addition to producing ammunition, weapons, and repair parts, AMC **depots and arsenals** refurbish, repair and overhaul every type of major weapon system in the Army inventory.

AMC Provides Process

AMC **unifies and synchronizes** all of the materiel life cycle functions nested within Major Subordinate Commands providing **Capability Based Solutions**: Research, development, acquisition, testing, distribution, supply, maintenance, industrial base operations and disposal.

ARFORGEN (Army Force Generation) was created to methodically generate and prepare a pool of ready units while improving predictability for Soldiers and Families. It is a rotational model based on progressive readiness with cyclical deployments.

As part of ARFORGEN, **Reset** rebuilds unit readiness, ensures strategic depth and synchronizes resources and materiel solutions to support and sustain forces during full spectrum operations.

AMC Provides People

AMC is where we are today because of a globally connected and multi-skilled team of military personnel, civilians and contractors working together to provide whatever our Forces need, in any environment, in any conditions.

Talented professionals from science, engineering, manufacturing and technology sectors collectively provide our Forces with the decisive edge.

A totally trained, totally ready workforce is fundamental to America's worldwide security and military superiority.

WHENEVER WHEREVER

AMC Provides Performance

From conflicts to humanitarian operations, **AMC** responds with materiel required to equip, sustain, integrate and enable.

AMC Equips our Armed Forces to fulfill their mission by ensuring that strategic, operational and tactical challenges are met with the most advanced and innovative equipment available.

AMC Sustains in an era of persistent conflict with materiel that is maintained, repaired, replenished, distributed and retrograded.

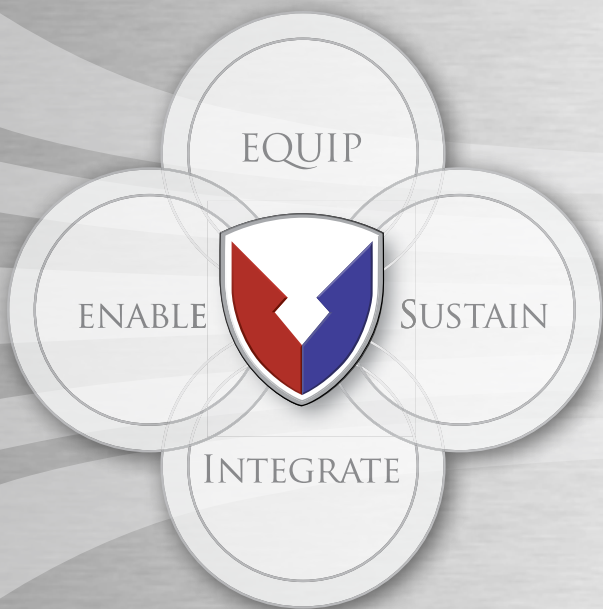

AMC Integrates materiel and logistics initiatives into an efficient role as the Army's Lead Materiel Integrator.

AMC Enables our Commands with the authority and resources to fulfill their mission in support of the Army and our Joint Forces.
